

## SMALL STEPS FOR BIG SAVINGS

Beaches Energy Services offers a rebate program for selected energy-efficient improvements. We know you want to conserve energy, lower your bills, and help protect the environment.

Rebates provide dollar credits that are applied directly to your utility bill. Beaches Energy Services helps you improve the energy efficiency of your home or business through the purchase and installation of energy-saving equipment and other improvements. We're committed to making it easier.

## SAVE A LOT!

### RESIDENTIAL REBATES:

*Qualified Products or Improvements*      *Maximum Rebate Amount*

|                                 |       |
|---------------------------------|-------|
| A/C Heat Pump SEER 14           | \$100 |
| A/C Heat Pump SEER 15 or higher | \$300 |
| Heat Pump Water Heater          | \$500 |
| Insulation Upgrade              | \$300 |
| Window Film/Solar Screen        | \$100 |
| Solar Water Heater              | \$500 |

### COMMERCIAL REBATE:

*Qualified Products or Improvements*      *Maximum Rebate Amount*

|                            |         |
|----------------------------|---------|
| Commercial Lighting Rebate | \$2,500 |
|----------------------------|---------|

## IMPORTANT NOTES: ELIGIBILITY AND REBATE PROCEDURES

- Energy-efficiency rebates are available only to Beaches Energy Services customers.
- Rebates do not apply to new construction homes or new commercial buildings.
- The qualifying energy-efficient equipment and installations must be located on the customer's premises.
- Applications for rebates must be submitted to Beaches Energy Services within 60 days of purchase or installation. Proof of purchase and/or installation must be attached to the application. (All receipts and invoices must be dated.) Additional information specific to the type of rebate may be required.
- On-site verification of installation may be required.
- Rebates will be awarded as a credit on your Beaches Energy Services utility bill. (Please allow 4-6 weeks for processing).
- A rebate cannot exceed the cost of the purchase and installation.

## THE UPGRADES AND WHAT THEY CAN DO

### A/C HEAT PUMP SEER 15 OR HIGHER

*Residential — Rebate \$300*

### A/C HEAT PUMP SEER 14

*Residential — Rebate \$100*

In Florida, air conditioning and heating consume approximately 50% of a home's energy usage. Older, less efficient central air conditioner units can be very costly to operate — and to maintain. New units use far less energy, lowering your electric bill. By replacing an old system with a 14 or 15 SEER unit (SEER is an industry efficiency rating), you could save up to 30% of your cooling cost annually.

### WINDOW FILM/SOLAR SCREEN

*Residential — Rebate up to \$100*

Radiant heat gain through windows and sliding doors can increase your cooling bill. Installing window film or solar screens on windows exposed to the south, east and west will help reduce the room temperature and the run time of your air conditioner.

### HEAT PUMP WATER HEATERS

*Residential — Rebate \$500*

Heat pump water heaters (HPWH) are more energy efficient compared to conventional water heaters, and draw less power. The savings of a HPWH can be up to 50% of a standard electric water heater. The location of the HPWH benefits from the cool exhaust emitted into the air.

### SOLAR WATER HEATER

*Residential — Rebate \$500*

Electric water heaters are the second largest electricity user in your home. A solar water heater

can significantly reduce the cost of heating water. It lasts an average of 20 years — much longer than a standard electric unit. Solar technologies can slash electricity bills and reduce pollution. Using the power of Florida's sun is a smart move, even with the initial investment.

### INSULATION UPGRADE

*Residential — Rebate up to \$300*

In a well-sealed home, insulation can really make a difference: keeping heat from entering in summer or escaping in winter, especially in the attic. Insulation's resistance to heat flow is measured as an R-value (thermal resistance). Many homes have an inadequate R-value. Adding additional attic insulation is an inexpensive way to lower energy bills.

### COMMERCIAL LIGHTING REBATE

*Commercial — Rebate up to \$2,500*

Thanks to advanced lighting technologies there has never been a better time to upgrade your lighting. New products have improved color quality and produce less heat. LEDs use less power (watts) per unit of light generated (lumens) and reduce greenhouse emissions. This rebate only applies to building improvement or retrofit projects. It is not available for new construction.

*For easy-to-understand information about these systems and improvements, visit [www.beachesenergy.com](http://www.beachesenergy.com), and [www.energystar.gov](http://www.energystar.gov).*

## READY TO APPLY? WANT MORE INFORMATION?

Beaches Energy Services is eager to help customers receive the energy-efficiency rebates and improve their homes and businesses. Here's how you can do it!

- 1 Be sure you qualify. Rebates are available to Beaches Energy Services customers and valid only on existing homes and businesses, not on new construction.
- 2 Request an application. Be sure to specify all of the desired rebates. For forms,
  - a. Call: 904-247-6241
  - b. Email: [customerservice@beachesenergy.com](mailto:customerservice@beachesenergy.com) (provide your contact information, address, and account number).
  - c. Download forms at [www.beachesenergy.com](http://www.beachesenergy.com).
- 3 Review the application forms, which contain detailed information about each rebate program.

*For additional information, please call 904-247-6241.*

Beaches Energy Services offers rebates to customers to make improvements and as an incentive to install qualifying energy-efficient equipment. All warranties and guarantees for equipment, installation, operation, and potential savings are the responsibility of the contractor and the manufacturer. This rebate program does not imply that Beaches Energy Services approves, sponsors, or endorses any particular product or company.
